

Paragon's APEX modeling software - There are four foundations of the transformation that align IT with the broader organizational goals: business management, executive leadership, operations management, and service management. Through our Cloud Readiness Assessment, we often see corporations focused solely on process or structural transformation. Failure to address all categories leaves significant value on the table. All transformations require a strong culture, a mind-set shift, and an understanding of these pillars to be successful.

If a transformation stalls, and many do, our results suggest that organizations can regain momentum by implementing rigorous change-management, Internal-communications programs and clarifying the transformation's projected impact, which can help build alignment and commitment. Going through our Paragon cloud readiness assessment adds insight and clarity to your transformation journey, whether you are just starting or if you're stalled.

Our Focus

Start by understanding your current state, including your strategy and struggles. Working with our partner AWS, we discover and address your IT ecosystem; understand the people, process and technology with enough detail to enable the right solutions and how they are integrated into your environment.

Our Approach

Using Paragon's APEX modeling software, a transformation maturity model offering, helps organizations understand their current state, helping them to advance an effective strategy for their transformation adoption journey. This model defines characteristics that determine the stage of maturity, transformation activities within each stage that must be completed to move to the next stage, and outcomes that are achieved across stages of organizational maturity, including: business management, executive leadership, operations management, and service management.

What You Can Expect

The objective of the Cloud Readiness Assessment is to help enterprise IT organizations understand the significant challenges they might face as they adopt a transformation, learn best practices and activities to handle those challenges, and recognize the signs of maturity or expected outcomes to gauge their maturity and readiness at every stage. To fully benefit from the transformation, the whole organization has to transform and adopt the transformation — not just the IT division.

About Paragon Solutions Group

Paragon Solutions Group helps IT teams more effectively interact with the rest of the business to enable growth and agility. Our progressive approach to IT maturity and our focus on measurable outcomes provides IT organizations with the perspective, methodology and tools to build a strong foundation that serves and is valued by all of IT's stakeholders.
