

Many nonprofits employ Advisory Councils — a collection of individuals who advise and support the governance work of the board or the management tasks carried out by staff. Paragon offers unique access to our Non-Profit IT Advisory Council.

- They provide you with specialized expertise that may be lacking in your nonprofit.
- Our council can be ambassadors to your NPO and connect you to a greater community.
- They can perform important duties, such as IT advocacy, and program/solution evaluation.
- Well-conceived and well-executed advisory councils can be very beneficial in driving your NPO transformation.

Our Focus

The Paragon Advisory Council is a collection of individuals who bring unique cloud knowledge and skills which augment the understanding and abilities of your IT staff and your formal board of directors in order to more effectively guide the organizations IT transformation.

In the Paragon IT Advisory, we help top-tier NPO enterprises lead in a global marketplace, navigate risks and opportunities, and disrupt the status quo. We encourage clients to embrace complexity and help them to accelerate performance. With profound changes underway in culture, technology, business models, and IT frameworks, we work with our clients as they become catalysts for change. And as the world evolves, so does our work. Year after year, our dynamic team influences commerce, society, and the future.

Our Approach

Working with the Paragon Advisory Council you have the power to redefine your ambitions. We operate in a supercollider of change and risk - we see risk as a not-so-subtle signal that there are likely also hidden opportunities. We help NPO sector clients lead by advising them on how to see risk through a new lens; and identify areas where they can disrupt their marketplaces through innovation and technology.

What You Can Expect

The Information Technology Advisory Council shall serve to advise the Chief Information Officer, and other senior officers as appropriate, on resources and priorities concerning all aspects of business management, executive leadership, operations management, and service management. The NPO technology ecosystem is vast and complex. It is virtually impossible for one person, or even one department to have expertise in all areas of technology. The Paragon Advisory Council can complement your team's knowledge, helping to ease the stress of making decisions outside of your area of technical expertise, shortening the time you invest in research, and reducing your overall risk.

Paragon's Unique Value Offering

Like a Morbidity and Mortality (M&M) Peer Review, we discuss customer issues in our bi-weekly internal M&M Innovation Conference. M&M are traditional, recurring conferences held by medical services at academic medical centers. M&M conferences involve the analysis of adverse outcomes in patient care through peer review. The objectives of a well-run M&M conference are to identify adverse outcomes associated with medical error, to modify behavior and judgment based on previous experiences, and to prevent repetition of errors leading to complications. Like the medical profession, our consulting practice has adopted the M&M – a place where we discuss customer outcomes, risks and behaviors. Once discussed internally within Paragon, your practice manager will bring you active input that comes from the whole advisory team; these years of experience coming from our c-level consultancy is paramount to your NPO success.
