Adam Mendlik, CTO, Paragon Solutions Group

Mendlik has a number of key responsibilities associated with Paragon's framework for software development and corporate software management. He gathers the collective knowledge of the team and provides the thought leadership to architect Paragon's unique Intellectual Property. Mendlik manages and deploys Paragon's software on solutions that are disruptive and intriguing to our customers ensuring that we have first hand knowledge of the strengths and weaknesses of each product.

Mendlik heads up Paragon's 'Cloud and Technology Enablement' pillar. In this role he demonstrates to clients how key technologies can be deployed and integrated in an agile manner.

As an IT automation and orchestration specialist, Mendlik has designed and developed some of the most innovative technology management solutions in the industry. He introduced automation disciplines at several companies, including Raytheon, First Data, and Visa, maturing their capabilities to industry-leading quality. With a demonstrated ability to master new products and technologies, Mendlik is able to quickly assess the technical capabilities of an organization. He has used these skills to plan and manage dozens of datacenter relocations and cloud migrations.

Mendlik has a broad technical background that spans every major computing platform from MS Windows to mainframe, public and private cloud technologies, and a host of datacenter management products. He uses this experience to tailor solutions to meet the customer's objectives that leverage assets the customer already owns. He has a strong track record of augmenting existing capabilities with new technologies to produce cohesive, integrated IT management platforms.

As a key member of the Paragon team, Adam helps our clients achieve their strategic vision with practical hands on ability to transform and automate key technologies.
